Lighting control system

Two-scene preset operation with the precision of timed fades

Idea from ETC uses state-of-the-art digital electronics to give you the simple operation of a two-scene preset board combined with the precision of a 120-cue, memory console. *Idea* uses advanced ETC technology to give you control of up to 512 DMX512 dimmers with 12, 24, 36, or 48 channels.

Group memories let you save the looks you use most often

Combine channels into groups to save 12, 24, 36, or 48 of your most frequently used looks. Modify levels with channel potentiometers, or by entering levels using the easy-to-use keypad. Modifications can be made in Stage (live) or Blind modes.

Create sophisticated chases and loops

Record up to 48 effects, each with up to 48 individual steps. Dedicated faders let you control rate and level separately, or use Step to play effect steps manually. Choose from Standard, Bounce, Build, or Random effects.

Restore live channels to recorded levels

Idea's Restore feature allows you to fade channels whose levels you have modified back to recorded levels.
